

Mrs G.G. Gerbing Azalea
Rhododendron 'Mrs. G.G. Gerbing'

Height: 8 feet

Spread: 8 feet

Sunlight: ☉ ●

Hardiness Zone: 6b

Group/Class: Southern Indica Hybrid

Description:

Dense clusters of stunning, large white blooms cover this azalea in mid-spring; a compact shrub with attractive, ovate evergreen leaves; this variety is noted for its sun and heat tolerance; needs highly acidic and organic soil that is well drained

Ornamental Features

Mrs G.G. Gerbing Azalea is covered in stunning clusters of lightly-scented white trumpet-shaped flowers at the ends of the branches in mid spring. It has dark green evergreen foliage. The small narrow leaves remain dark green throughout the winter.

Landscape Attributes

Mrs G.G. Gerbing Azalea is an open multi-stemmed evergreen shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Mrs G.G. Gerbing Azalea is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Mrs G.G. Gerbing Azalea will grow to be about 8 feet tall at maturity, with a spread of 8 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It may require supplemental watering during periods of drought or extended heat. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
