

Southern Wax Myrtle

Myrica cerifera

Height: 15 feet

Spread: 10 feet

Sunlight: ☉

Hardiness Zone: 6b

Other Names: Southern Bayberry

Description:

Select a male and female plant to produce the ornamental waxy-blue berries, that are a high energy food source for birds; tolerant of wet or dry, infertile soil; aromatic foliage repels insects, and is used to make candles; a great hedge or screen

Ornamental Features

Southern Wax Myrtle is primarily grown for its highly ornamental fruit. It features an abundance of magnificent blue berries from mid summer to mid fall. It features subtle chartreuse catkins along the branches from late winter to early spring. It has grayish green evergreen foliage. The fragrant narrow leaves remain grayish green throughout the winter.

Landscape Attributes

Southern Wax Myrtle is a multi-stemmed evergreen tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This tree will require occasional maintenance and upkeep, and may require the occasional pruning to look its best. It is a good choice for attracting birds, bees and butterflies to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering

Southern Wax Myrtle is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Topiary
- Bog Gardens

Planting & Growing

Southern Wax Myrtle will grow to be about 15 feet tall at maturity, with a spread of 10 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This tree should only be grown in full sunlight. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in poor soils. It is somewhat tolerant of urban pollution. This species is native to parts of North America. It can be propagated by cuttings.

Lindley's Florida Native

Neat, easy to grow Florida native shrub with moderate salt tolerance. Larval host for banded hairstreak (*Satyrrium calanus*) and red-banded hairstreak (*Calycopis cecrops*) butterflies.
