Height: 16 inches

Spread: 24 inches

Spacing: 18 inches

Sunlight: ○

Hardiness Zone: 8b

Other Names: Osteospermum

Group/Class: Voltage Series

Description:

These semi-double flowering daisies bloom profusely in spring, sulk in the summer heat, and then start blooming again when temperatures cool in fall and have a compact habit makes them ideal for beds and containers; allow soil to dry between watering

Ornamental Features

Voltage Yellow African Daisy is smothered in stunning yellow daisy flowers at the ends of the stems from mid fall to early summer. The flowers are excellent for cutting. Its spiny narrow leaves remain green in color throughout the season.

Landscape Attributes

Voltage Yellow African Daisy is an herbaceous perennial with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep. Trim off the flower heads after they fade and die to encourage more blooms late into the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Voltage Yellow African Daisy is recommended for the following landscape applications;

1232 Canal Street
New Smyrna Beach, FL 32168
Phone: 386-428-7298

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Container Planting
- Hanging Baskets

Planting & Growing

Voltage Yellow African Daisy will grow to be about 16 inches tall at maturity, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.

Voltage Yellow African Daisy is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
